■ Abrasive disk APP F666

Features

A modern abrasive disk on foil purposed for machining and repairs. Perfect tool that provides smooth base of varnish coat prior to polishing.

Specification

Grits: Korund

Distribution: Open

Binder:

- Synthetic adhesive- wet and dry use
- Stearin compound protection against clogging between abrasive grits

Base:

- Base from polyester film- smoother than paper what is essential in case of fine grits, increased base hardness provide for increased strength of the whole structure and increased mechanical strength.

Application

Automotive industry P1500, P300

- Grinding and finishing applications
- Minor repairs and removal of scratches of top varnish
- Top varnish flattening

Joinery P2000, P2500

- Furniture sanding
